| New Material Text | Section 5.6 replace with: |

On long-term freeway construction projects, TCB or other equivalent barrier systems should be installed to protect workers from vehicular traffic in accordance with Regulation 213/91, Section 67 of the OHSA.

They may also be used to positively separate two-way, high-speed/high volume traffic flows.

TCB shall be according to OPS or other standard when specified by a road authority. Factors to consider include:

- TCB should only be used on a solid surface, such as asphalt or concrete pavement.
- TCB can be laterally displaced when struck. On high speed roadways when TCB protection is required within 0.5m of an excavation or within 1.0m of structures not designed for impacts (eg. Scaffolding), or within 1.0m of the edge of a bridge deck, TCB restraint systems or reduced deflection TCB system should be used.
### New Material Text

**Bullets #1-4 replace with:**

- Lane closures are required to place a barrier. It should be constructed in the downstream direction.
- An offset distance of at least 0.5m from the edge of a lane to the barrier is desirable.
- TCB and energy attenuators should be offset and installed according to OPS or as specified by the road authority.
- TCB can impact roadway drainage. Winter sand and other debris can block drainage openings under the TCB. TCB drainage gaps should only be used when justified based on a hydraulic analysis at key drainage locations (sumps, catch basins, etc).

Table G on page 196 (page number missing) shows TL-74 against Intersections (eleventh row); Replace with TL-75

The note below Table G on page 196 reads: “When a technician is intermittently and MOMENTARILY (NOT CONTINUOUSLY) on the travelled lanes of the roadway the typical layouts TL-73B, TL-74, TL-76 can only be used if sight lines in both directions exceed 250 m where NPRS is greater than 80km/h, 200m where the NPRS is between 60km/h and 80km/h or 150m where the NPRS is 60km/h or less.”

The note should read as follows:

“When a technician is intermittently and MOMENTARILY (NOT CONTINUOUSLY) on the travelled lanes of the roadway, the typical layouts TL-73B, TL-74, TL-76 can only be used if sight lines in both directions:

- exceed 250m where NPRS is greater than 80km/h,
- 200m where the NPRS is greater than 60km/h and less than or equal to 80km/h, or
- 150m where the NPRS is 60km/h or less.”

### Classification of the Error
Modifications to Figure

### Existing 2014 Text
Related to modifications to **Figure TL-16 Parking Lane Closed.**

### New Material Text
TL-16 should be updated as follows:

- The TC-4 sign should be shown at or just beyond the beginning of a lane closure taper similar to TL-10 and consistent with the guidelines provided on page 140,
- TC-2B or TC-2A are only required for short and long duration works and not for very short duration works. Therefore, a note in brackets showing short and long duration should be considered under these sign names within the layout,
- The box showing WORK VEHICLE with Beacon plus 4WF OR TC-12 is only applicable for short and long duration works similar to TL-10. Therefore, a note in brackets showing short and long duration should be considered under these sign names within the layout.
The layout should be modified as follows:

- The Yield to Oncoming Traffic (Rb-91) Sign should be installed in the direction of the closed lane and located at a distance in advance of the lane closure specified in the appropriate table (Table A or B:5*). Therefore, in the layout Rb-91 will be at a distance of 5* from the work area.
- The position of other signs should be adjusted relative to the new position of Rb-91.

Therefore, the new sequence of signs in the direction of closure will be read as: Rb-91 at 5* from the start of the work area, Wb-1A at 5* from Rb-91, TC-2B or TC-2A at 5* from Wb-1A, TC-1 at 5* from TC-2B or TC-2A, and TC-1A at 1.0 km from TC-2B or TC-2A. Other dimensions within the layout stays the same.

Delete existing Note i).
Replace existing Note iii) with:

On high speed (70km/h or greater) or where lane keeping/compliance is an issue use, consider using TL-20B Lane Closed (Traffic Control Persons). For Short Duration projects on MTO highways it is recommended to use TL-20B.

Delete note i) on TL-32.
Figure TL-40 shows a TC-7 sign in the southbound direction. The arrow shown in this sign is pointing towards right for southbound traffic. **The arrow should be pointing towards left for southbound traffic.**

TL-41 should be considered with the following modifications:

- A TC-12 on the crash truck should be shown in bar mode,
- The location of the truck should be at an LBA distance from the end of the transition taper (2\* from Table C), similar to Figure 38,
- The TC-16ER(2) sign across from the work area should be replaced by a TC-16EL(2) sign.

**Figure TL-42(i) should apply to both short and long duration works,** similar to Figure TL-42(ii).
Figure TL-44 shows a TC-12 sign in bar mode. The **TC-12 sign should be in left arrow mode**.

The position of the TCP in TL-46 **should be consistent with other similar layouts (e.g. TL-20A)**. The TCP should be placed at a distance specified in the TCP table on page 100 from the first cone of transition taper. The length of the transition taper should be equal to 1a* (Table A and Table B).

The note ii) should read: "**When traffic volumes are high or when the intersection is signalized, consult the road authority to determine whether police assistance is required. Care should be taken by the TCP to coordinate with intersection control such as traffic signals or stop sign.**"

The TC-7 sign in the westbound direction should be considered having an arrow pointing towards right.
Figure TL-65 shows a box with a TC-4 OR TC-12 in bar mode. The box reads as if it applies to the northbound traffic, whereas it is intended to apply to the eastbound traffic. The TC-4 in the box shows the arrow pointing up and to the right.

The box should be considered as oriented in a way so that it applies to eastbound traffic. The TC-4 sign should be considered pointing up and to the left.

Figure TL-67, the wording on the right side of the shown buffer vehicle should read:

**BUFFER VEHICLE:**

**CRASH TRUCK (NPRS 80 km/h or greater)**

**BLOCKER TRUCK (NPRS less than 80 km/h)**

Note i) of the layout should read:

“A CRASH TRUCK must be used on High Volume roads and/or where the NPRS is 80 km/h or higher. Road Authorities, other than MTO, may not require a BUFFER VEHICLE on Low Volume roads with NPRS less than 80 km/h.”
### New Material Text

The usage of TL-66 as shown in Table G on page 195 should be considered as correct. TL-66 should be considered for short and long duration with the following modifications:

- Additional TC-1 sign should be considered for long duration works in advance of and at a distance of 5* from TC-2B or TC-2A sign for both directions.
- TC-2B or TC-2A should be installed as required. The notes in bracket showing “(short duration)” under TC-2B or TC-2A for both directions in the layout should be omitted.

### New Material Text

The boxed explanation in Figures TL-73B, 75 and 76: Replace with, “This layout is applicable where a worker/technician is moving throughout the work area intermittently with only brief stationary moments, for example a survey technician.”
A technician may intermittently and MOMENTARLY (NOT CONTINUOUSLY) enter the travelled lanes of the roadway ONLY if sight lines in both directions:

- **exceed 250m where NPRS is greater than 80km/h,**
- **200m where the NPRS is greater than 60km/h and less than or equal to 80km/h, or**
- **150m where the NPRS is 60km/h or less.”**

Any worker/technician/equipment that occupies the live lane continuously, whether moving or stationary is considered very short or short duration and the appropriate typical layouts must be used. The duration of the work equals total time between setup and removal of traffic control devices to complete the work within the intermittent work area.”
